OnePlus released FAQ by Oxygenos – correcting reboots and problems with the battery

OnePlus published an updated FAQ in Oxygenos, in which she explained the popular problems of users and the innovations of the operating system. So, if your smartphone itself is rebooted, the company advises updating the Google Play Services to version 25.25.33 or higher. Other tips are in our material.

To disclose contacts between WhatsApp and the Contact application, it is recommended to get out of WhatsApp and enter the account again.

Some models are faced with an accelerated battery consumption. OnePlus confirmed the availability of a problem and asked users to report details through the feedback service.

FAQ also talks about the V90P00 version. The update adds a multilingual translation function and an optimized gallery with the ability to create a photo using AI with one press.

The company explained the work of new tools. Mind Space – a digital space for relaxation, it can be configured through the settings> Accessibility and convenience> Mind Space> preserve. SCRAMBLE CLOCK helps not to miss important events: it is activated through the clock> Alarm Doctor> "+"> Scramble, where you can set time, date and signal.

The Temporaryly Block function disables notifications during games or watching video and is also turned on through settings.
