

On August 13, Poco M7 Plus will be presented in India. The company has already disclosed part of the characteristics, and on the novelty page in Flipkart there were details about the display.

The smartphone will be equipped with a large 6.9-inch LCD screen with an update frequency of 144 Hz. The screen has a certificate of Tüv Rheinland: reduces the level of blue light, does not flicker and supports technologies “favorable for natural biorhythms”.

Earlier it became known that the Poco M7 Plus will receive a 7000 mAh battery with support for reverse charging. Officially, other characteristics have not yet been confirmed.

The design of the rear panel is with a relief mesh and red-blue stripes along the edges. The chamber block contains two cameras. In India, the smartphone will probably cost about \$ 170 taking into account starting discounts.

According to rumors, the POCO M7 Plus may turn out to be a renamed version of Redmi 15 5G. If so, the device will receive the Snapdragon 6s Gen 3 processor, the main camera at 50 MP and an additional 2 MP sensor, a 8 MP front camera, as well as support for fast charging 33 watts.
