

The Russian Academy of Education will create scientific centers based on three regional universities. The agreements were signed with the Penza State University, the Saratov State University and the South Russian Polytechnic University named after M. I. Platov in Novocherkassk.

According to President RAO Olga Vasilieva, the Academy has already opened 73 scientific centers in leading universities in the country. A feature of the new network is that each institution will work on a unique topic without duplicating the research of other universities.

Earlier it became known that the canopy of 2025 in Novosibirsk will begin [work](#) The first joint center for clinical research in Russia, created by Sechenov University and Novosibirsk State University. The agreement on its creation was signed at the Technoprom-2025 forum. The new center, called the “West-East”, will be engaged in two main directions. The first is the organization and conduct of clinical testing of new drugs. The second is search research for the development of innovative medical technologies.
