

Recently, the first photos of the new Realme 15t smartphone appeared on the Web. Earlier, the device with the RMX5111 model number was lit up in the Geekbench test with the MediaTek Dimensity processor 6400 Max and 8 GB of RAM.

A fresh picture shows the option with 128 GB of built -in memory, although, most likely, there will be other configurations.

Social networks

Realme 15t will receive a 6.5-inch AMOLED display with FullHD+ resolution and a 7,000 mAh battery. The cameras include the main 50 megapixel + 2 megapixels on the rear panel and 50 megapixels are frontal. The phone does not have a telephoto lens or an ultra -shirt module.

The smartphone will probably work on Android 15 with the Realme UI 6.0 shell, according to Geekbench. The remaining characteristics and the date of the official release are still unknown.
