

Renders POCO M7 4G - “younger brother” of the freshly enoned M7  
Plus 5G flowed

After the announcement of the Poco M7 Plus 5G, the company prepares another smartphone of the series - the Poco M7 4G. Unlike past models, a new phone will only work in 4G networks. Now we know how it will look.

According to the leak, the POCO M7 4G will receive the Snapdragon 685 processor, a large 6.9-inch LCD display with a resolution of FHD+, the update frequency of 144 Hz and the maximum brightness of 850 threads. The battery with a capacity of 7000 mAh will maintain a fast charge of 33 watts, but the charger may not be included in the kit, at least for the European market.

The smartphone will be offered in two versions: 6 GB of RAM and 128 GB of internal memory, as well as 8 GB of RAM and 256 GB of internal memory. To expand the volume, you can use a microSD card. The device will work on Hyperos 2 based on Android 15.

For photos and videos, there are a 50-megapixel main camera and an 8-megapixel front, both with support for video recording in Full HD. The case will receive IP64 protection.

It is expected that the novelty will appear on sale this month in some regions.
