

It has become easier to rent or rent an apartment: now the lease can be issued through public services, the mincifera write. The first service where this function is available was cyan, but in the future other platforms will be able to use it.

The mincifera indicated the advantages of the online service:

- **Not needed** Personal meeting - the parties can be in different cities.
- **Participants** They are authorized through public services, which guarantees the authenticity of people in the transaction.
- **Documents** Checked and relevant.
- **Confirmed** The ownership of the apartment - it is impossible to rent someone else's housing.
- **Big** Part of the fields of the contract is filled automatically, reducing the risk of errors.
- **Can** Immediately issue temporary registration for the employer online.

Public services

How does this work?

- **Owner** Or the realtor placed an ad on the cyan marked "Online". A link to the service of public services appears in your personal account.
- **Owner** It fills out the contract, indicating the conditions: the number of residents, a ban on smoking, accommodation with animals, etc.
- **Appears** The QR code, which the employer scans or receives a link.
- **Employer** It is authorized through public services, checks the contract and confirms it through the State Unitary Enterprise. The signature is given 24 hours.

If temporary registration is included, an application is automatically formed in the Ministry of Internal Affairs through public services. You can check the data and send the document completely online – the visit to the department is not required.
