

Roscosmos showed pictures of the erupting volcano Klyuchevskaya hill

The press service of Roscosmos published a photo of the current volcano Klyuchevskaya hill in Kamchatka. The state corporation monitors the activity of the volcano.

Satellite images obtained from the meteorological devices “Electro-L” and “Arctic-M” continue to record the presence of a smoke train coming from the volcano.

Previously, ash emissions were recorded to a height of up to 10 km. The Main Directorate of the Ministry of Emergencies in the Kamchatka Territory provided a warning about the possibility of a small number of ash in the nested points of the Ust-Kamchatka district.
