

## Samsung corrected the bug with reproaching the moon into purple on the Galaxy S25 Ultra

Samsung eliminated a strange problem with the Galaxy S25 Ultra camera, because of which the images of the moon through the zoom looked purple. The bug appeared in the One UI 8 Beta 4 and touched an increase of 10x to 100x. In Beta 3, this problem was not. She, as they write, was associated with the error of image processing in the zoom algorithms.

After users' complaints on the Samsung forums, the moderator confirmed the bug and promised the correction. Now the ONE UI 8 Beta 5 (ZYH6 firmware) update has begun to spread among users. The update (which contains not only the corrections of the color of the moon) weighs about 1.78 GB.

The firmware also includes the August Patch of the Security of 2025, the improvement of the stability of the work of nine system functions and the correction of problems with Wi-Fi access points and S Pen Air Command.
