

Samsung, following SoftBank, will also invest in Intel to go around the duties of Trump

Inciders from WCCFTECH, citing Korean sources, said that Samsung plans to invest in Intel chipmaker in order to reduce the risks associated with the possible introduction of tariff measures by the Donald Trump administration. The American president actively calls on world manufacturers to invest in the US economy, threatening the restrictions on those who do not follow his call.

As noted, Intel plays a key role in the development of the production of semiconductor chips in the United States. Earlier, the TSMC company announced plans to build a third plant in the country, and the Japanese SoftBank announced the intention to invest \$ 2 billion in Intel, which led to a significant increase in the cost of the company's shares. Moreover, the company is experiencing difficulties in the innovation market due to competitors.

It is reported that Samsung sees in investments in Intel a strategically profitable step from both the political and economic point of view, to appease Trump. Allegedly, the corporation has already completed an internal analysis and plans cooperation with the American company AMKOR, which specializes in the packaging of semiconductors.

And this strategy can be beneficial for both sides: Intel receives the necessary support in conditions of rigid and growing competition, and Samsung will be able to avoid tariff restrictions, which will strengthen the company's position in the American market.
