

Satellites were taken from the Plesetsk cosmodrome to orbit in the interests of the Russian Ministry of Defense

TASS reports that from the Cosmodrome Plesetsk, located in the Arkhangelsk region, on August 21, the Angara-1.2 launch vehicle was launched with military satellites as a payload.

According to the Ministry of Defense, the start of the carrier was in accordance with the specified schedule, and the elimination of satellites to the calculated orbit was made without deviations from the specified parameters. After the start of the Angara, it was escorted by means of the main testing space center named after Hermann Titov.

"The start of the launch vehicle and the display of spacecraft to the calculated orbit were held as usual. After the start of the lung class, the Angara-1.2 lung-class launch vehicle was taken to support by means of the ground automated complex of control of the main testing space center named after German Titov. In the calculation time, spacecraft were brought to target orbits and accepted to the management of ground-based means of space troops of the VKS, "it was said.
