

Sony lowered and put the camera block in the Xperia 10 VII in a horizontal position

Sony is traditionally very conservative in the design of its smartphones. But with the Xperia 10 VII, the company prepares a slight change, according to the merged promotion.

According to the seller of the covers on Amazon, the new smartphone will change the location of the cameras. Unlike Xperia 10 VI, where two cameras are located vertically, in the Xperia 10 VII they will be placed horizontally. The last smartphone of the company with a horizontal camera was Xperia 10 in 2019.
