

The new Moto G06 budget smartphone will soon enter the market, but its key characteristics have already become known thanks to a number of certificates and leaks.

The device with the XT2535 model number has been tested by FCC, TUV Rheinland, UL Demko and appeared in the Geekbench base. It became known that the smartphone supports LTE, a two-band Wi-Fi and Bluetooth.

According to Geekbench, Moto G06 works on the MediaTek Helio G81 Extreme chipset and 4 GB of RAM is equipped. The smartphone will be delivered with the Android 15 operating system.

Certification of UL Demko and TUV also revealed the battery capacity - 5100 mAh, with support for charging with a capacity of 10 watts.

Moto G06 will appear in three colors: Pantone Tapestry, Arabesque and Tendril.

According to early data, the device will be offered in different memory options, and the price in Europe promises to be "affordable". The official date of launch has not yet been named.
