

The network continues to be replenished with leaks about the new Samsung Galaxy A07 smartphone. Recently, the device appeared in the certification database, and fresh renders revealed the design and color options.

According to insiders, Galaxy A07 will be released in three colors: dark gray (or dark blue), green and light blue.

Some characteristics are also known. The smartphone will receive a chipset made in the 6-nm technology process (according to rumors-MediaTek Helio G99), 6 GB of RAM and protection against dust and spray according to the IP54 standard. The screen is 6.7 inches, LCD, with a resolution of HD+ and an update frequency of 90 Hz.
