

A new video with the iPhone 17 Air layer in the color of Sky Blue has appeared. The new shade of Sky Blue is not quite pastel, but brighter than other muffled blue. The phone, as commentators note, looks “nice” and attracts subtlety – the last rumors call the dimensions 5.65–5.7 mm.

The iPhone 17 Air will become part of the iPhone 17 line, the presentation of which is expected at a special event on September 9.

According to rumors, the characteristics of the smartphone include the following key points:

- **Frame** It is made of aluminum with possible elements from titanium.
- **Screen** -6.6-inch OLED display with support for Promotion technology and update frequency up to 120 Hz, including the Always-on Display function.
- **CPU** -Apple A19 Bionic (without prefix Pro), 3-nm process process, 6 nuclei, 8 GB of RAM.
- **Camera** - One main wide -angle camera 48 MP with optical stabilization and video recording 8K. Front camera 24 megapixels.
- **Battery** - It is assumed about 2800-3000 mAh and fast charging up to 35 watts.
- **Possible** Lack of physical SIM cards, support only ESIM.

The price of the novelty can be about \$ 899.
