The new AI-Speaker launched by Donald Trump was ridiculed for Reddit

Recently, Trump Media has released a new "smart" search engine Truth Search AI. The company and the search engine belong to Donald Trump. This search engine is based on the Perplexity search engine.

The message about the new search engine says that his task is to make more information available to people. Now Truth Search AI is tested in the web version of the Truth Social platform-social networks belonging to Trump. Soon it can be used in smartphones on Android and iOS.

"We are glad to cooperate with Truth Social to provide powerful artificial intelligence of the audience, which asks important questions. Curiosity – the driving force of change, and the artificial intelligence of Perplexity is designed to encourage curiosity, providing direct and reliable answers with transparent links that allow everyone to dig deeper, "commented on the situation by Perplexity Sales Dmitry Shelylenko.

However, people reacted differently to the prospects for using Truth Search AI. Some Reddit users wrote that it will be better to use the usual Google or Bing by Microsoft. And some said that Perplexity would no longer use due to the connection with Trump Media.
