

Oppo is developing new Reno 15 smartphones, which, according to rumors, will receive three versions at once. Since 2023, the Reno line usually includes a standard and Pro model, but now, it seems, one more average will be added.

According to Digital Chat Station, Oppo tests three screens: 6.3 inches, 6.59 inches and about 6.78 inches. All models will be with flat displays.

The characteristics have not yet been completely disclosed. It is expected that Reno 15 Pro with a screen of 6.78 inches will receive a new Dimensity 8450 processor and a 200 megapixel camera from Samsung, complemented by an ultra-stroke lens and a 50-megapixel "periscope" camera.

The youngest and senior models (6.3 and 6.78 inches) can also get a metal frame and support for wireless charging. According to rumors, even a compact option will be equipped with a "periscope".

The Reno 15 presentation is expected in November in China along with the new Coloros 16 shell based on Android 16. Before that, the company will release the Find X9 series - its announcement is scheduled for October.
