

The scientific center of drones will be created in the Novosibirsk region

In the Novosibirsk region will appear the Scientific and Production Center “Unmanned Avia Systems”. According to Governor Andrei Travnikov, the institution will be placed on the territory of the Novonikolaevsky technopark. An autonomous non -profit organization has already been created for the implementation of the project.

According to the head of the region, 40 companies engaged in the production of aircraft and components for them were registered in the region. The development strategy of the Center will be formed taking into account the conditions of the federal program of the national project for unmanned aviation systems.

The Novosibirsk Region is considered as one of the key centers of competencies in the field of bass. This is due to a large number of scientific research, development and production capacities of federal and international significance.

Financing the development of the industry of unmanned aircraft systems in the region until 2030 will amount to more than 10 billion rubles.
