

Vivo will soon be released by a series of X300 smartphones – it will include X300, X300 Pro and, possibly, a compact version of the X300 Pro mini. Official announcement is expected in the fourth quarter. The other day, the base model X300 appeared in the Geekbench base.

Thanks to this, it became known that the smartphone will receive a new MediaTek Dimensity 9500 processor, the presentation of which is scheduled for September. A prototype with the V2509A index was tested, equipped with 16 GB of RAM and working on Android 16.

The results of the Geekbench 6.3.0 test showed: 2,352 points in a single -core mode and 7,129 points in multi -core. However, it is worth remembering that these are preliminary indicators, since the device is still at the development stage.

Some processor details are also known. Dimensity 9500 will receive one powerful core with a frequency of 4.21 GHz, three nuclei per 3.5 GHz and four more by 2.7 GHz. Mali-G1 Ultra MC12 is responsible for the graphics.
