

Xiaomi introduced an external battery of 5000 mAh with a thickness of only 11.8 mm

Xiaomi has released a small and thin PowerBank, which is easy to carry with you. The device weighs only 110 grams and has a thickness of 11.8 mm. This was told by the Chinese portal IT Home.

A special cable is built into the battery, which can be used as a carrying strap. This cable is declared as strong: according to insiders, the cable sank tests for 10,000 bending cycles. In addition, it is easy to turn it off from Powerbank.

The device has a built-in battery with a capacity of 5000 mAh. It was stated that even after 300 full charging cycles, the battery will retain about 80% of the power. Moreover, when using this Powerbank with compatible Xiaomi phones and a special cable, the battery will be able to quickly charge the phone and charge itself: the device charges other devices with a power of up to 22.5 watts, it itself is charged with a capacity of 20 watts.

Also in the battery there is a NTC sensor that constantly checks the temperature and does not allow the gadget to overheat. For heat removal, a copper foil with a graphite coating is used, which occupies an area of 3,000 square mm.
