

Xiaomi released a filter capable of purifying water from insect eggs

Xiaomi introduced a water filtering system for the home of Mijia Pre-Filter Pro/ the filter is equipped with a bio -onic membrane with the pores of 40 microns, capturing sediment, rust, hair and insect eggs. The degree of cleaning is up to 98.6%, protecting household appliances from clogging and scale.

The self -cleaning system with the “Odda opening, two turns, three cleaning” allows you to rinse the filter every 7, 15 or 30 days. The water consumption is 8 t/h, which provides the simultaneous use of several points of water clearance without reducing pressure.

The filter operates at temperatures from -50 ° C to 80 ° C and pressure up to 20 bar, is protected from freezing, explosion and waterproof. The built -in battery excludes the need for external nutrition.
