

The author of the YouTube channel Tech Spurt from more than millions of subscribers found out how much the Pixel 10 Pro XL and 9 Pro XL actually differs.

The design of 9 Pro XL and 10 Pro XL is very similar, although the novelty weighs a little more. 10 Pro XL works at the latest Android 16. Google offers 7 years of OS updates and safety updates. You will also have an exclusive function for the 10th version of the AI Magic Q.

If you live in the States, you will get a Pixel 10 Pro XL without a tray for SIM cards. Smartphones for the United States support only ESIM. At the same time, the minimum capacity of the internal memory of 10 Pro XL has now become 256 GB.

The 10 Pro XL display has only a couple of small changes compared to the predecessor. This is LTPO technology, peak brightness 3300 thread, the function of adjusting brightness for sensitive eyes. Google also put a more powerful lower speaker on the new product.

On the Pixel 10 Pro XL is a new Tensor G5 processor. But if you are a gamer, it is better to look for something else.

The battery capacity increased slightly in the novelty: to 5200 mAh. However, the autonomy of 10 Pro XL did not become better from this. In addition, the maximum charge power is again only 45 watts.

From the point of view of the camera you get on 10 Pro XL about the same thing. It has a 50 MP main sensor, a 48 MP TV with 100 times zoom (in 9 Pro XL it was 30 times), 48 megapixel super-cheat. You can familiarize yourself with the photo examples above.

Conclusion

From the point of view of the hardware of changes, 10 Pro XL is not so much, and the camera has the same one in general. The battery capacity of the 10th version became a little larger, the screen is a little brighter and less flickering, the sound is a little louder. The only reason that Pixel 10 Pro XL is worth buying is if you really need some of the AI functions that it supports.
