

In the Kazachinsko-Lensky district of the Irkutsk region, a scientific site “Cosmodrome of Childhood” in the territory of primary school has opened for children. At the site, students will be able to learn about space, planets, atmosphere and energy sources in the universe in a playful way.

The site is equipped with interactive equipment: telescopes, solar panels and other elements with which children can interact. Each gaming object has a QR code leading to a site where parents can read educational articles with children.

Science.rf

The goal of the initiative is to introduce children of preschool and primary school age to the basics of science, and parents – with modern scientific capabilities and career prospects for children. The sites are built throughout Russia.

The opening of this site took place on September 1.
