

Google has completed the creation of II-ZCHKs and is ready for a quick announcement

Google has completed the development of its own AI-Figures and is ready for a quick announcement, reports iThome.

The prototype was created by Quanta, and the contract manufacturer was HTC, which has experience in the release of Vive Eagle's own points. Thus, the entire supply chain is already ready, and the product output depends only on the Google solution.

It is worth noting that the market of smart glasses is now actively growing. According to Counterpoint Research, in the first half of 2025, supplies increased by 110% of the year by the year. Moreover, 78% fell on the model with AI, while a year ago their share was less than half.

The leader of the segment remains the company of Tsuckerberg due to the joint model jointly with the Ray-Ban and a share of 73%.

Experts note that Google's exit is able to seriously change the balance of power. Thanks to the Android XR platform, the company will be able to offer the users of Android interface and closer integration with smartphones.
