

Lenovo still showed a laptop with a swivel screen and a “following” stand

At the IFA 2025 exhibition, Lenovo introduced two unusual concepts. A laptop stand with integrated head tracking and laptop itself, which can turn its screen 90 degrees.

Smart Motion Concept is a laptop stand that has a head tracking function. The camera and the laptop microphone along with the software are monitored by the user’s movements so that the screen is always directed to the eye. The stand supports medium -sized laptops and is equipped with fans for cooling. There is even a “AI-ring” to control the movement of the stand with gestures.

The second concept shown is Thinkbook Vertiflex Concept, a screen laptop that can be turned vertically. The mechanism is complex. Additionally, the laptop allows you to connect the phone to transmit files or mirror shit of the screen.

So far, these are concepts that do not have a release date.
