

The host of the Max Tech YouTube channel told what updates are waiting for us in AirPods Pro 3, which will be presented very soon.

**A completely new case.** The conjugation button will only be one, and the light will pass through the case during the charging of the headphones, as in the case of AirPods 4. In addition, according to rumors, boxing for AirPods 3 Pro will be less.

**New chip H3.** It will increase the speed of the headphones, reduce the delay, improve transparency, recognition of conversations, make siri more reliable, etc. New functions will also appear. For example, a live translation.

**Improved active noise reduction.** Most likely, Apple will update microphones. He will receive an update and transparency mode.

**Temperature determination.** Thanks to this function, AirPods will warn you when you start to rise the temperature or when you will have a risk of receiving a heat stroke.

Max those

**Improved quality dynamics.** Now in many headphones - AirPods Pro 2 analogues two speakers: one for bass and medium frequencies and one for high frequencies. Therefore,

Apple will either go along this path, or pump what is already there.

**Heart rhythm monitoring function.** Most likely, she will appear in the novelty.

**Reducing the size of the headphones.** Due to this, they should become much more convenient.
