

NVIDIA reduced GPU supplies for RTX 5060 and 5060 Ti, which is why video cards may rise in price

According to Chinese sources, NVIDIA temporarily reduced the supply of GPU for video cards RTX 5060 and RTX 5060 Ti with 8 GB of memory.

It is reported that the volume of orders for partners (AIC) was reduced by about 15% for RTX 5060 Ti and almost 30% for the base RTX 5060. This solution will directly hit the accessibility of models in the coming weeks.

Experts expect that due to reducing deliveries, prices for both cards can be stabilized or even go up, especially against the background of high demand for budget and mid-budget video cards.

There are no official comments from NVIDIA yet, but the company took similar steps earlier, regulating the market due to GPU volume management.

For buyers, this may mean increasing prices and a retail deficit, especially in regions with limited supply channels.
