Sber and government of the Primorsky Territory entered into an agreement on cooperation in the implementation of artificial intelligence technologies (AI). The document was signed at the X Eastern Economic Forum as deputy chairman of the board of Sberbank Anatoly Popov and the first vice-governor of the Primorsky Territory by Vera Shcherbina.

Partnership is aimed at digital transformation of key sectors of the region. The parties plan to jointly develop and introduce AI solutions in the fields of education, healthcare, transport, tourism and social support.

In the educational field, a system for the development of skills necessary in a digital economy will be created. This will allow you to prepare specialists of new profiles, such as Prom-Engineers and data analysts.

In healthcare, it is planned to introduce artificial intelligence algorithms for processing medical images and analyzing the condition of patients. These decisions are designed to increase the availability of diagnosis and support doctors in making clinical decisions.

For the development of tourism, partners will be created by the creation of a detailed statistical system. This will help participants in the market and authorities to make more reasonable decisions and adapt proposals to the needs of tourists.

In the field of transport, it is planned to introduce modern fares and digital services for passengers. It is expected that this will increase the comfort of traveling in public transport.
