

The best graphics cards are named for purchase in September 2025,
so as not to regret it in years

Want to update? Here are what options now it is worth paying attention from those that are on the market. Depending on your budget, of course.

5 to 10 thousand rubles

Of the cheapest and most relevant here - GT 1030 (suitable only for office programs), from used games - GTX 1660, 1660 Super, 1660 Ti, RTX 2060.

From 10 to 20 thousand rubles

The best sentence of the new is RX 6500 XT. You can also see the GTX 1650, but it is more expensive and weaker than the previous one. There is also RTX 3050.

From 20 to 30 thousand rubles

RX 6600 is the most normal option for games from inexpensive video cards. A little more expensive is the RX 7600: it is about 15% faster than 6600.

For about 30 thousand rubles, you can purchase 4060, which is enough for the comfortable passage of most projects. Almost the same price is another 5050, but this is almost the same.

From 30 to 40 thousand rubles

If you need a card with 12 GB of video memory, then look at the Arc B580. In most popular games, you will not have problems with her.

A more reliable option is RTX 5060 by 12 GB, which is on average 25-30% faster than 4060. According to rumors, next year 5060 Super with 12 GB will be released, which should become a folk card. However, if you are in the Russian Federation and you now have money, it is better to take 5060 (after all, the ruble is very unstable).

Living games

From 40 to 50 thousand rubles

RX 9060 XT at 16 GB is the most adequate solution in this segment for today. An analogue is 5060 Ti at 16 GB, but it costs from 50 thousand rubles. In terms of performance, it is also better.

From 50 to 70 thousand rubles

RTX 5070 will be a good option for 1440 rubles. If you find 4070 or 4070 Super up to 50-52 thousand rubles, you can take them. The 9070 CT in the same price category has a plus in the form of 16 GB of video memory, but now 12 GB is enough in most games. You can also wait for the release of 5070 Super, which will have 18 GB and increase in performance by 5-10%.

From 80 to 100 thousand rubles

The most affordable and balanced option is now RTX 5070 Ti. You get 16 GB of video

memory and a powerful chip. She copes with any games perfectly if you choose a normal performance.

From 100 to 130 thousand rubles

With RTX 5080 you will forget about compromises. She pulls the games in 1440r with ultra-settings without any problems. The Super version with the same chip is also expected soon, but 24 GB of memory.

From 200 thousand rubles

Here, the choice will be between RTX 4090 and 5090. This is still the top video cards that start everything at all, even in 4K with maximum settings.
