

The company from Ugra began the supply of platforms for drones

Sirin, the Ugra company, a resident of a local technopark, shipped the first batch of its FlyCortex platform. This system is designed for use in unmanned vehicles, drones and robots. Information about this was confirmed by the Ugra Development Fund.

Contracts for the pre-order of the half of the first batch were concluded according to the results of the Sprint 2.0 Accelerator demo, which organized the Development Fund for Internet Initiatives. Serial production of the innovative platform was launched by the company in June of this year.

In addition to FlyCortex, the company offers other products. Among them is the Sirin video platform for large -scale video surveillance systems, the development of specialized electronics and solutions for creating artificial intelligence.

Over the five years of Sirin's work, Established business relations with partners from Turkey, the CIS countries, Europe and Africa. In 2022, her Rubearsoft project, which is an artificial intelligence service for the Smart Yard organization, became the finalist of an accelerator of technological startups in Ugra.
