

Google has reported the successful rollout of a new artificial intelligence solution designed for the education sector — “Gemini for Education”. The system is built on Gemini 2.5 Pro, recognized as one of the world’s leading models optimized for learning.

According to Google’s official statement, this capability is offered free of charge to all Workspace for Education users. The new AI platform was developed to support teachers, enhance students’ learning experiences, and increase access to digital educational resources.

With “Gemini for Education,” educational institutions can improve efficiency in:

- lesson preparation,
- data analysis,
- creation of creative projects,
- providing personalized support to students.

Google notes that the system is intended to expand the safe and responsible use of AI technologies across all K-12 schools worldwide.
